

RAYSECUR®

CAPABILITIES STATEMENT

RaySecur® provides advanced mail-security technology for government agencies, protecting personnel and facilities from concealed threats using real-time 4D T-ray (terahertz) imaging. MailSecur® screens sealed items to detect powders, liquids, weapons, explosives, electronic devices, and CBRNE precursors without opening packages or exposing staff, supported by 24/7/365 EODSecur incident expertise from former military and federal law-enforcement professionals. MailSecur® is the first desktop T-ray mail screener to receive a U.S. Department of Homeland Security SAFETY Act Designation as a Qualified Anti-Terrorism Technology (QATT), enhancing mission continuity and force protection across critical government environments.

PROBLEM SOLVED

- **Concealed Threat Materials:** Detects hidden chemical, biological, radiological, and explosive (CBR&E) materials—along with powders, liquids, and other contraband—concealed in mail, parcels, and diplomatic pouches that evade X-ray and other conventional screening systems.
- **Mission Continuity and Protection:** Mitigates mail-borne threats targeting senior leadership, government facilities, and critical infrastructure—reducing disruption, ensuring continuity of operations, and protecting personnel.
- **Rapid, Safe Deployment:** Portable, non-ionizing screening technology deploys within minutes, requires no radiation permits or certifications, and enhances existing security postures across fixed and field-based operations.

OPERATIONAL CAPABILITY

- Rapid screening and detection for all 9 types of mail and postal threats listed by U.S. Department of Homeland Security (DHS) concealed inside sealed mail items, pouches, and personal items.
- Real-time live video T-ray (terahertz) imaging enabling hands-on screening with the ability to save imaging data locally and enable remote access on demand for investigations and threat resolution.
- Additional radiation, metal detection and optical video imaging capabilities.
- Capable of portable and mobile deployments, including battery-powered operation.

RAYSECUR SOLUTIONS

- USDHS Safety Act Designated Qualified Anti-Terrorism Technology (QATT).
- MailSecur® is a desktop mail security screener that uses real-time 4D T-ray imaging to rapidly detect concealed CBRNE threats, contraband, and prohibited items—including powders, liquids, radiological materials, and metals.
- EODSecur® 24×7 Security Advisory service provides round-the-clock access to former U.S. military EOD, USPIS, and law enforcement threat experts—providing on-demand guidance, risk assessments, SOP and policy development, and implementation support.
- MailSecur® service packages include installation, certification, and remote training; access to an online learning platform; maintenance, calibration, and software updates—ensuring each deployment aligns with operational requirements and compliance standards.

RaySecur's technology fills a critical gap in mail security not addressed by X-ray systems... We added the MailSecur device to our mail screening procedures.
